

Berenberg Aktien Global Plus R A

Actively managed equity fund

Investment Strategy

Berenberg Aktien Global Plus is a global equity fund. The Berenberg Multi-Asset-Strategy team's neutral equity market opinion means that 90% of the fund is invested in equities. The investment level can be actively managed using futures and exchange traded funds (ETFs). The portfolio invests primarily in global individual securities and mutual funds and follows a fundamental bottom-up investment approach. The main driver of stock selection is the underlying above-average and sustainable profit growth of the companies. The fund management invests in companies that achieve sustainable growth over long periods of time with high profitability. The decisive criteria for these business models are high entry barriers, end markets with structural growth and excellent management teams. Active approach, i.e. index weights have no influence on individual stock selection.

Fund management comment

The US elections, increased geopolitical risks in the Middle East and a mixed reporting season are fuelling increasing volatility in the capital markets. The Berenberg Aktien Global Plus Plus Fund underperformed its benchmark in October. Last month, ASML shares underperformed the market. The company presented solid quarterly figures in the middle of the month, but the order book was well below expectations. After a surprising change of CEO, Campari's shares performed weakly. With the report for the third quarter, which was again significantly worse than expected, the shares fell to their lowest level since March 2020. We closed the position. Marvell's shares rose significantly in October. This was mainly due to positive indications from customers and competitors regarding the growth outlook in the data centre segment. Wheaton Precious Metals benefited from solid results and rising gold and silver prices. We opened new positions in Straumann, Xylem, Alcon and ASM International.

BVI method: The charts and tables regarding performance shown here are based on own calculations according to the method developed by the German Investment Funds Association (BVI). They illustrate past performance. Future performance can deviate both positively and negatively from these calculations. Gross performance (BVI method) takes into account all charges at fund level (e.g. management fee), net performance plus the issue surcharge. Additional charges can arise for individual investors (e.g. custody account fees, commissions and other fees). Model calculation (net): An investor wants to purchase fund units for EUR 1,000 Euro. Considering a max 5.50. issue surcharge of 5.50 he has to pay EUR 55.00 Euro for the purchase. Also, fees may be charged for the administration of the safe custody account, which will lower the performance. Past performance is not a reliable indicator of future performance.
