

Berenberg Guardian R A

Actively managed multi-asset fund

Investment Strategy

The Berenberg Guardian is an actively managed absolute return fund. It is aimed at investors seeking return opportunities through interest income, hedging and tactical opportunities, particularly in falling markets. In this way, the fund aims to help investors diversify their equity investments.

The fund combines fundamental and macroeconomic analysis with quantitative models in a discretionary investment approach. The strategy aims to deliver positive returns with low drawdowns and volatility over 12-month periods, a negative correlation to falling equity markets and a low correlation to "normal" equity markets. These objectives meet the needs of investors seeking steady returns, protection during market downturns and the potential for gains when opportunities arise.

Fund management comment

The stock markets made a strong start to the new year, particularly in Europe. The Euro Stoxx 50 rose by almost 8% in January. The rally was fuelled by low valuations, low interest rates, a weak euro and hopes of political change in the run-up to the German elections. The S&P 500 posted a positive but significantly lower return of 2%. What helped in Europe was a burden in the USA: the high positioning and expensive valuations left little room for additional optimism. In addition, news about the Chinese start-up DeepSeek and its low-cost AI model R1 weighed on the index heavyweights from the technology sector. However, thanks to a solid reporting season, increased market breadth and a shift in favourites towards consumer staples, healthcare and banks, the S&P 500 remained surprisingly robust. Realised volatility was below 15% for most of the month and the VIX remained below the 20 mark. The put skew flattened significantly for a while in January. The Berenberg Guardian recorded slightly more volatile returns at the beginning of the month due to unrealised gains from the previous month. With the expiry and partial monetisation of hedges, the NAV stabilised again at the end of the month.

Opportunities

- Attractive return potential over the medium to long term
- Above-average performance by exploiting investment opportunities across regions and asset classes, with a focus on attractive market segments and structural investment themes
- Potential for additional returns through active and opportunistic management

Risks

- High volatility of shares, riskier bonds and currencies, price losses possible
- Unit value can fall below the purchase price at which the client acquired the unit
- No guarantee of success due to active and opportunistic management
- The conclusion of index and currency futures for quota control can increase the risk of loss, at least temporarily

Further details on the opportunities and risks of this fund can be found in the sales prospectus.

BVI method: The charts and tables regarding performance shown here are based on own calculations according to the method developed by the German Investment Funds Association (BVI). They illustrate past performance. Future performance can deviate both positively and negatively from these calculations. Gross performance (BVI method) takes into account all charges at fund level (e.g. management fee), net performance plus the issue surcharge. Additional charges can arise for individual investors (e.g. custody account fees, commissions and other fees). Model calculation (net): An investor wants to purchase fund units for EUR 1,000 Euro. Considering a max 3.00. issue surcharge of 3.00 he has to pay EUR 30.00 Euro for the purchase. Also, fees may be charged for the administration of the safe custody account, which will lower the performance. Past performance is not a reliable indicator of future performance.
