

Berenberg Global Focus Fund R A

Actively managed equity fund

Investment Strategy

The investment objective of the Berenberg Global Focus Fund is to achieve long-term capital growth that outperforms the benchmark MSCI All Country World Index over a medium to long-term period. The main driver for this is the underlying above-average and sustainable profit growth of the selected companies. Investors in the fund participate in global companies with structural trends.

The fund management invests in companies that achieve sustainable growth over long periods with high profitability. The decisive criteria for these business models are high entry barriers, end markets with structural growth and excellent management teams.

- Growth-oriented fund
- Concentrated portfolio of about 30 stocks
- All cap approach, i.e. exploiting investment opportunities across all market segments
- Long-term investment horizon and therefore low portfolio turnover
- Active approach, i.e. index weights do not have influence on individual stock selection

Fund management comment

The US elections, increased geopolitical risks in the Middle East and a mixed reporting season underpin the increasing volatility on the capital markets. The Berenberg Global Focus Fund outperformed its benchmark in October. Marvell shares rose significantly in October. The main reason was positive indications from customers and competitors regarding the growth outlook in the data centre sector. Wheaton Precious Metals benefited from solid results and a rising gold and silver price. Canadian Pacific in contrast underperformed. The company reported mixed quarterly figures that were below market expectations, characterised by low freight volumes. ASML also underperformed the market. The company presented solid quarterly figures in the middle of the month, but the order book was well below expectations and significantly worse than in the previous quarter. We sold our shares as we see more promising investment opportunities in the semiconductor sector, particularly in the USA with Marvell.

Consideration of ESG Elements

Identifying companies and business models that will be successful in the long term is the basis for good investment decisions. Environmental, Social and Governance (ESG) factors are key factors in decision making and are therefore integral components of the investment process.

CO₂ Intensity

The fund does not actively manage its carbon footprint, however, emissions data such as CO₂ intensity are relevant parameters which can be used to assess the efficient management of a company and the extent of transition risks.

ESG Score

The data provider MSCI ESG uses an ESG score of 0 to 10 to assess the management of material ESG risks of portfolio holdings compared to competitors.

ESG Controversies Screen

Investments in the fund are monitored for ESG controversies and, with the help of MSCI ESG data, flagged according to their severity. Thereby, potential ESG risks of investments are identified. In the case of an orange flag (severe controversy), we enter into an active exchange with the company. In the case of a red flag (very severe controversy), the company is excluded.

Benchmark for ESG metrics: MSCI AC World

Portfolio as of 31 Oct 2024. Source: MSCI ESG, own calculations and presentation. Certain information © 2023 MSCI ESG Research LLC. Reproduced by permission. Data coverage for fund and benchmark: graph "CO₂-Intensity" (95.55%/99.94%), graph "ESG Score" (95.55%/99.89%). Liquidity and securities which are not covered by MSCI ESG are excluded from the calculation of the ESG metrics for the fund as well as the benchmark. The weights of the remaining fund and benchmark components are normalised to 100%.

Glossary & Methodology

Active Ownership

The term "Active Ownership" encompasses all our activities where we, as an investor, attempt to positively influence a company's management of ESG aspects. This includes Engagement, i.e. direct dialogue with companies to discuss specific ESG objectives as well as proxy voting, i.e. our voting recommendations to our fund administrator, which then exercises the voting rights at general meetings.

CO₂ Intensity

The CO₂ Intensity (Scope 1 & 2 emissions) per company is multiplied by its portfolio weight (current value of the investment by current portfolio value) and summed up. This weighted average CO₂ Intensity provides an indication of the portfolio's exposure to CO₂-emission intensive companies.

ESG Score

Using a score between 0 (lowest) and 10 (highest), MSCI ESG assesses the ability of portfolio holdings to identify and manage environmental, social and governance-related risks compared to peers. The ESG scores are assigned at the holding level and are aggregated at the portfolio level as the weighted average ESG Score.

ESG Controversies Screen

MSCI ESG analyses controversial business practices from the five areas environment, human rights, labour rights & supply management, customers and governance. The controversies are rated according to their reputational risk as well as the operational handling by a flagging system. Green indicates no or weak controversies, yellow indicates moderate controversies, orange indicates severe controversies and red indicates very severe controversies.

Opportunities

- High return potential of stocks over the long-term
- Development of growth stocks occasionally above average
- Development of small-cap stocks above average in certain phases
- Possible additional earnings through individual value analysis and active management

Risks

- High susceptibility of shares to fluctuation, price losses possible
- Share value may fall below the purchase price at which the customer acquired the share
- Below-average development of growth stocks possible at times
- Below-average development of small stocks possible at times
- No guarantee of success for individual value analysis and active management
- Concentration risk due to focus on investments in the Euro currency and European region
- Foreign currency investments and transactions denominated in foreign currencies are subject to exchange rate risks

Further details on the opportunities and risks of this fund can be found in the sales prospectus.

BVI method: The charts and tables regarding performance shown here are based on own calculations according to the method developed by the German Investment Funds Association (BVI). They illustrate past performance. Future performance can deviate both positively and negatively from these calculations. Gross performance (BVI method) takes into account all charges at fund level (e.g. management fee), net performance plus the issue surcharge. Additional charges can arise for individual investors (e.g. custody account fees, commissions and other fees). Model calculation (net): An investor wants to purchase fund units for EUR 1,000 Euro. Considering a max 5.00. issue surcharge of 5.00 he has to pay EUR 50.00 Euro for the purchase. Also, fees may be charged for the administration of the safe custody account, which will lower the performance. Past performance is not a reliable indicator of future performance.
