

Berenberg Health Focus Fund M A

Investment Strategy

"The fund management invests in global healthcare stocks that generate above-average and sustainable earnings growth over a long period of time. The fund focuses on companies that contribute to significantly improving human health, extending life expectancy and/or reducing healthcare costs. The long-term attractiveness of the healthcare sector is supported by demographics and social change due to the ageing population and rising wealth, especially in emerging countries.

- Investment in global stocks of any company size
- Portfolio of around 35 - 50 stocks
- Active and benchmark-agnostic approach
- Long-term investment horizon"

Fund management comment

Following a technical rally, the stock market recovery was slowed by economic concerns and tariff uncertainty in the US. The Berenberg Health Focus Fund was unable to beat its benchmark last month. The continued lack of acceleration in US prescription data weighed on Novo Nordisk. Eli Lilly's share price also suffered from the rotation out of growth stocks. Investors took profits in the absence of newsflow. Shares of medical technology company Intuitive Surgical came under pressure. This was mainly due to fears of tariffs on US imports and the rotation out of growth stocks. By contrast, shares of health insurers UnitedHealth and Elevance outperformed the sector in March, as they are not significantly exposed to tariffs. In addition, they are rather favourably valued and had previously been avoided by investors. Fresenius SE was able to achieve slight price gains in a difficult market environment. Last month, we added Asker Healthcare and RaySearch Laboratories to the portfolio, but sold our remaining positions in PolyPeptide, Gerresheimer, Laboratorios and SKAN.

Consideration of ESG Elements

Identifying companies and business models that will be successful in the long term is the basis for good investment decisions. Environmental, Social and Governance (ESG) factors are key factors in decision making and are therefore integral components of the investment process.

CO2 Intensity

The fund does not actively manage its carbon footprint, however, emissions data such as CO2 intensity are relevant parameters which can be used to assess the efficient management of a company and the extent of transition risks.

ESG Score

The data provider MSCI ESG uses an ESG score of 0 to 10 to assess the management of material ESG risks of portfolio holdings compared to competitors.

ESG Controversies Screen

Investments in the fund are monitored for ESG controversies and, with the help of MSCI ESG data, flagged according to their severity. Thereby, potential ESG risks of investments are identified. In the case of an orange flag (severe controversy), we enter into an active exchange with the company. In the case of a red flag (very severe controversy), the company is excluded.

Benchmark for ESG metrics: MSCI World Health Care Index

Data coverage for fund and benchmark: graph "CO2-Intensity" (98.24%/100.00%), graph "ESG Score" (98.24%/100.00%). Liquidity and securities which are not covered by MSCI ESG are excluded from the calculation of the ESG metrics for the fund as well as the benchmark. The weights of the remaining fund and benchmark components are normalised to 100%.

Glossary & Methodology

Active Ownership

The term "Active Ownership" encompasses all our activities where we, as an investor, attempt to positively influence a company's management of ESG aspects. This includes Engagement, i.e. direct dialogue with companies to discuss specific ESG objectives as well as proxy voting, i.e. our voting recommendations to our fund administrator, which then exercises the voting rights at general meetings.

CO2 Intensity

The CO2 Intensity (Scope 1 & 2 emissions) per company is multiplied by its portfolio weight (current value of the investment by current portfolio value) and summed up. This weighted average CO2 Intensity provides an indication of the portfolio's exposure to CO2-emission intensive companies.

ESG Score

ESG Controversies Screen

MSCI ESG analyses controversial business practices from the five areas environment, human rights, labour rights & supply management, customers and governance. The controversies are rated according to their reputational risk as well as the operational handling by a flagging system. Green indicates no or weak controversies, yellow indicates moderate controversies, orange indicates severe controversies and red indicates very severe controversies.

Opportunities

- High return potential of stocks over the long-term
- Development of growth stocks occasionally above average
- Development of small cap stocks above average in certain phases
- Possible additional earnings through individual value analysis and active management

Risks

- Share value may fall below the purchase price at which the customer acquired the share
- High susceptibility of shares to fluctuation, price losses possible
- Below-average development of growth stocks possible at times
- Below-average development of small stocks possible at times
- No guarantee of success for individual value analysis and active management
- Foreign currency investments and transactions denominated in foreign currencies are subject to exchange rate risks

Further details on the opportunities and risks of this fund can be found in the sales prospectus.

None of the ESG Parties shall have any liability for any errors or omissions in connection with any data herein, or any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

BVI method: The charts and tables regarding performance shown here are based on own calculations according to the method developed by the German Investment Funds Association (BVI). They illustrate past performance. Future performance can deviate both positively and negatively from these calculations. Gross performance (BVI method) takes into account all charges at fund level (e.g. management fee), net performance plus the issue surcharge. As no issue surcharge is incurred for this share class the gross performance corresponds to the net performance. Additional charges can arise for individual investors (e.g. custody account fees, commissions and other fees). Also, fees may be charged for the administration of the safe custody account, which will lower the performance. Past performance is not a reliable indicator of future performance.
